

Nomad

Ever wanted to expand your German vocabulary without putting in loads of hours a week?

Outline

The Problem

I'm learning German and frequently find myself confused when I can't understand common words that I missed while studying.

Solution Proposal

Nomad is a React web-app that pulls German words, their translation, definition and pronunciation, and displays them to the user.

The user can then save the words to revisit them later, or refresh the page for a new word.

The Stack

- PostgreSQL
- Node
- Express
- React
- MaterialUI

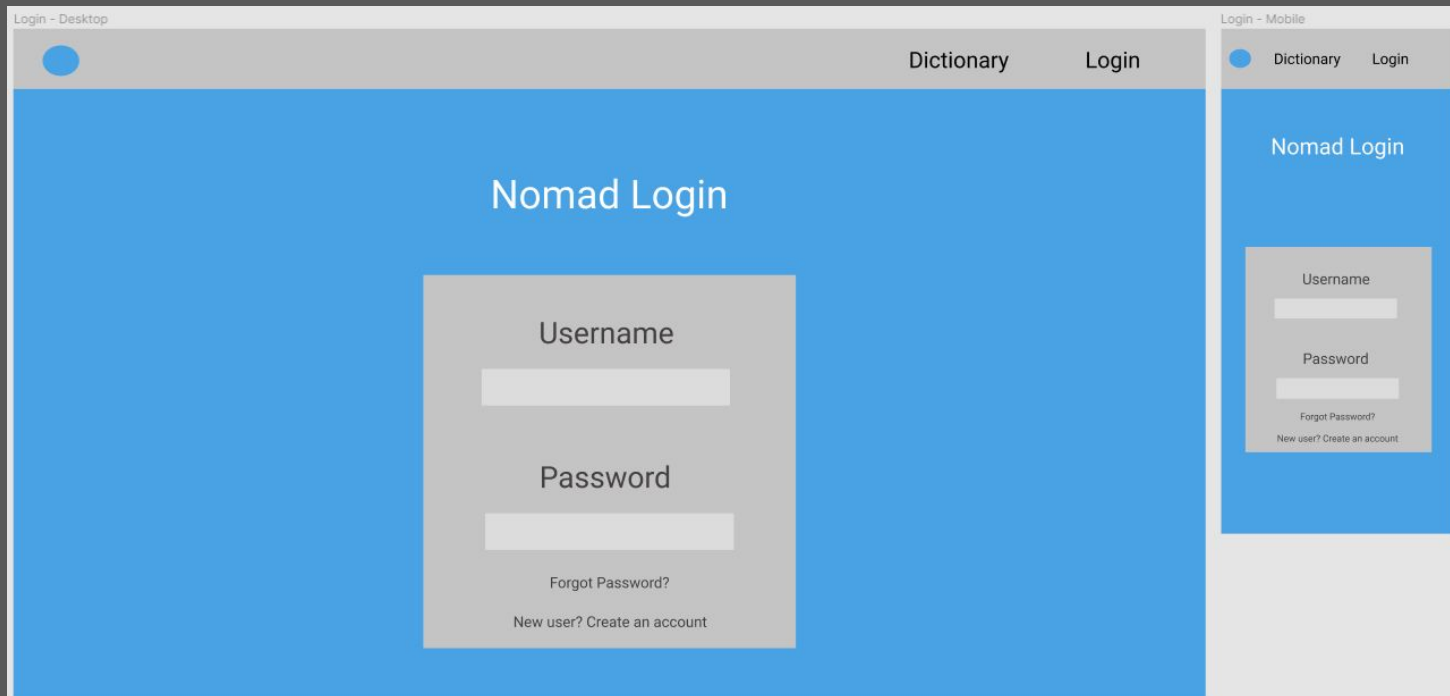

Use cases / user stories

- “As a user, I want to be able to visit the home page, and learn a new word..”
- “As a user, I want to be able to sign in and view my profile”
- “As a user, I want to be able to save words I’ve discovered to my dictionary, and access them later.
